ASX Preliminary Final Report  
Appendix 4E

30 September 2016

Lodged with the ASX under Listing Rule 4.3A

## Results for Announcement to the Market

		<b>Consolidated</b>	
		<b>2016</b>	<b>2015</b>
		<b>\$'000</b>	<b>\$'000</b>
Revenue from ordinary activities	Up 7 %	2,890	2,699
(Loss) / profit before income tax from continuing operations	Down 276%	(-283)	161
Profit before income tax from all operations	Up 10%	291	265
Profit after tax attributable to members	Up 232%	302	91

In the 2016 financial year, the Company received revenue and incurred expenses associated with long term contracts to manage carbon plantations on behalf of clients in Australia and in relation to dairy operations in Australia.

The EBITDA profit for 2016 is \$1.14 million up from \$1.04 million in 2015.

The Company considers EBITDA to be the best measure of the existing business profitability due to the nature of the carbon plantation business, which includes long term management fees, land and forestry right assets and significant non-cash expense items which are deducted to achieve the net profit. For example, amortisation of forestry rights expense (non-cash) was \$745,232 in 2016.

The Company is pleased to confirm:

- Liabilities were reduced to \$0.43 million compared to \$2.57 million in 2015;
- Debt was reduced by \$1.89 million during the year to \$0.12 million;
- Net assets have increased to \$12.56 million versus \$12.19 million in 2015;
- Cash and receivables have increased to \$2.51 million from \$0.98 million in 2015.

## Dividends

No dividends have been paid or declared since the start of the financial period and the directors do not recommend the payment of a dividend in respect of the financial period.

## Review of Operations

The year to September 2016 saw the Company embark on some significant changes within the business whilst continuing to manage its core agri-forestry operations in Australia including:

- Continuation of Carbon Farming Initiative (“CFI”) projects in Australia
- Change of name to Alterra Ltd
- Sale of NZ assets for NZ\$3.6 million (AU\$3.2million)
- Closure of NZ business
- Repayment of remaining debt
- Commencement of Dairy Project in WA

### Ongoing CFI Project Management

Alterra continues to manage approximately 18,000 hectares of agri-forestry projects in Western Australia to generate Australian Carbon Credit Units (ACCUs), and Voluntary Carbon Offsets. The Company have existing contracts for ACCUs out until 2027 which generate management fees of circa \$2.7 million per annum.

Field work which included tree measurements and plantation monitoring and FullCAM modelling, informed the Company's ongoing development of growth models, and supported Offset Reports to the Clean Energy Regulator. ACCUs were generated by both CFI projects with some delivered against an Emissions Reduction Fund Carbon Abatement Contract and others transferred to a client.

### Change of Name

At the AGM of the Company held on 29 February 2016, shareholders overwhelmingly supported the change of name to Alterra Ltd, to better reflect the Company's long term ambitions in agribusiness. Alterra began trading under the new code 1AG from 29 March 2016.

### Sale of NZ Assets

As announced by the Company on 4 April 2016, Alterra's New Zealand assets consisting of land, plantations, forestry rights and NZU's were sold for NZ\$3.6 million(AU\$3.2million). Settlement occurred on 1 April 2016 and the majority of funds were repatriated back to Australia. The Company no longer has any active business in New Zealand.

### Repayment of Debt

As announced by the Company on 14 April 2016, Alterra repaid its remaining bank debt on 13 April 2016 – 3 years ahead of schedule. The Company is debt free with at the date of this report circa \$2.4 million in cash and receivables as well as continuing contracted revenue in Australia out till 2027.

### Dairy Project

During January-April 2016, various works were undertaken at the Capel Farm site to assess its potential under System-5 dairy. International System-5 dairy management and engineering consultants were teamed with local construction and environmental engineering consultants to conduct extensive site assessments and develop high level designs. The Capel Farm site was ultimately unsuitable for the Company's objectives and Alterra decided to exit its position and focus on conducting feasibility studies on a number of green field sites. The Company is now primarily focussed on one site and is in discussions with various stakeholders including landholders, government agencies and potential customers while conducting the next stage of feasibility.

During 2016, international and Eastern Australian dairy markets deteriorated in response to an oversupply of milk. In Western Australia, there has been some negative sentiment resulting from several farmers not having their contracts renewed by local processors. However, with a different market pricing structure (fixed price multi-year contracts), WA farmers were largely sheltered from the international downturn in 2016.

Alterra's base case strategy is to develop a large scale System-5 farming operation to supply milk to local processors and the WA market. It is the Company's view that over the medium to long term, the supply side will come under pressure in WA as some farmers continue to exit the industry due to various issues including but not limited to; uncompetitive cost structures, requirements for CAPEX investment to replace aging infrastructure, competition for land and increased land prices, the age of farmers and in many cases, limited succession opportunities. In addition, the Company believes there will continue to be growing demand from Asia to compete for access to production.

The Company is of the view that that there are productivity and market advantages to be gained from System-5 farming because it enables the efficient production of relatively high volume and consistent quality milk to be produced in consistent monthly volumes throughout the year.

Given the structure of the WA market and the characteristics of System-5 production, the initial key agreement to be reached, from Alterra's perspective, is an off-take agreement with a local processor. An agreement for offtake will not be finalised until a site has been selected by the Company, and development of a selected site will not occur until an off-take agreement is finalised.

Alterra understands that a majority of existing WA dairy farmers will undertake contract renewal discussions during 2017, and with a potential positive movement of the international and Eastern Australian dairy markets on the horizon, opportunities may present to secure long term off-take agreements.

The mega-trend of increased demand for Australian dairy into Asia continues to excite us and the Company remains focussed on the objective of developing a cost and quality leading dairy project that supports long term domestic and export opportunities.

There are a number of areas to work through before a final investment decision can be made. Key activity and decision milestones for 2017 will include Board consideration of a reviewed detailed business case and of a potential site. Should the outcome of the Board review be positive, then the Company will seek finalisation of land and water access requirements, environmental management requirements, arrangements for power development, and development of facility designs and engineering plans with the intention to complete a finalised bankable feasibility study by the end of 2017. A large component of this work has already been commenced by the Company over the last few months and a more detailed outline of project timeframes will be made public once a decision has been made as to committing resources to the next stage as outlined above.
